Dear Mr. Kiddle:

I asked Professor Roger Ekins to write a chapter for my book *Principles of Nuclear Medicine* on his newly developed techniques for immunoassay procedures because I think the potential for these techniques is excellent and they should become widely used in the future. These techniques are especially interesting and unique because of the small amount of sample necessary and the high degree of sensitivity and specificity which can be obtained. I feel his chapter and the description of the work he has done in this area of research is a very valuable addition to my book and will provide the reader with much needed and useful information.

The book will be published by W. B. Saunders Company, Philadelphia, and we anticipate publication in early 1995.

If I can be of any further help in your quest to obtain a patent for Professor Ekins work, please let me know.

Sincerely,

Henry N. Wagner Jr.
